

# Remote sensing of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, from the scale of the decades to hours

*The case of the Haut Glacier d'Arolla*

Master thesis in Geography  
Direction - prof. Stuart Lane

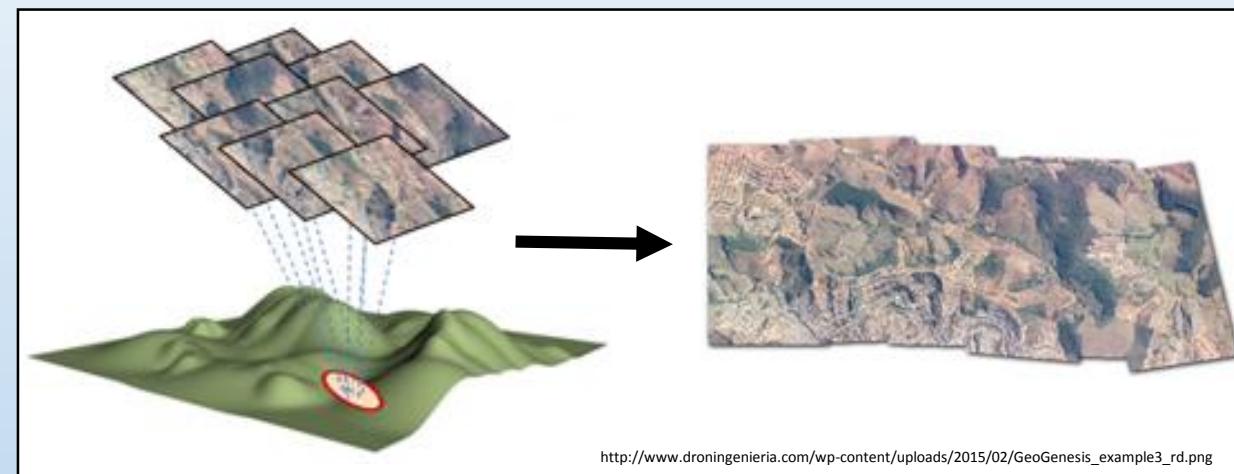

Prix de Quervain 2015

Chrystelle Gabbud  
PhD Student - IDYST  
University of Lausanne

**Remote sensing** of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, from the scale of the decades to hours; The case of the Haut Glacier d'Arolla

«... is the acquisition of information about an object or phenomenon **without making physical contact** with the object and thus in contrast to on site observation ... »

[Campbell, J. B. (2002). *Introduction to remote sensing - 3<sup>rd</sup> Edition.* The Guilford Press]

[http://www.droningenieria.com/wp-content/uploads/2015/02/GeoGenesis\\_example3\\_rd.png](http://www.droningenieria.com/wp-content/uploads/2015/02/GeoGenesis_example3_rd.png)

- Aerial photogrammetry

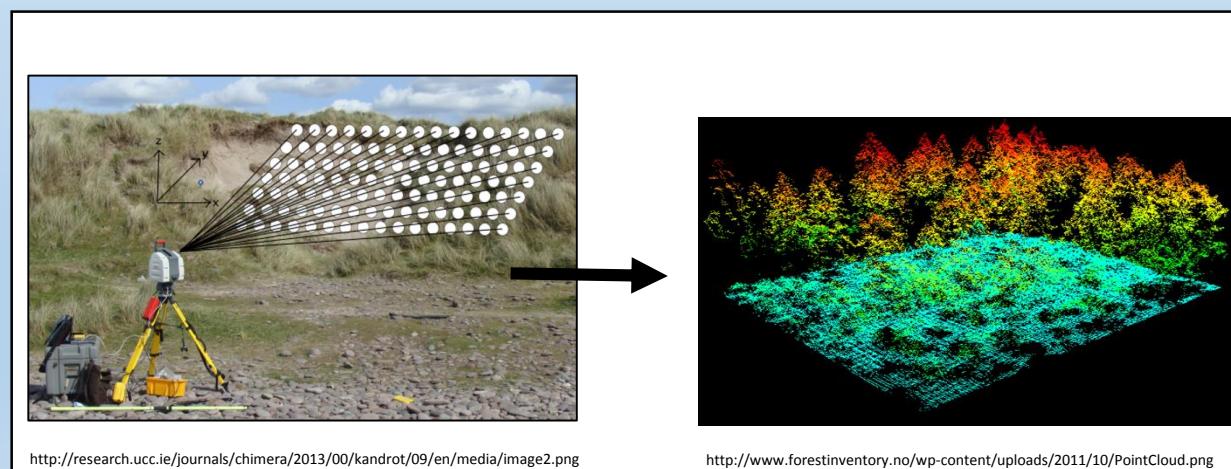

## 1. Remote sensing methods

**Remote sensing** of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, from the scale of the decades to hours; The case of the Haut Glacier d'Arolla

«... is the acquisition of information about an object or phenomenon **without making physical contact** with the object and thus in contrast to on site observation ... »

[Campbell, J. B. (2002). *Introduction to remote sensing - 3<sup>rd</sup> Edition.* The Guilford Press]

- Aerial photogrammetry
- Terrestrial laser scanning – LiDAR

### ❖ 3D topography

Digital Elevation Model (**DEM**)

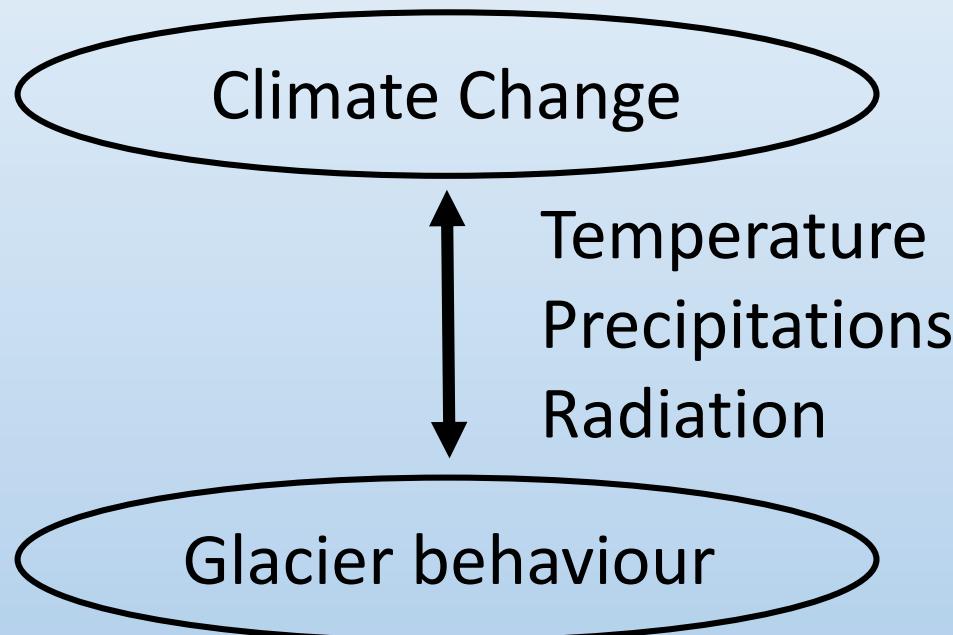

DEM of Difference (**DoD**) ( $T_1-T_2$ )

Blue = deposition  
Red = erosion

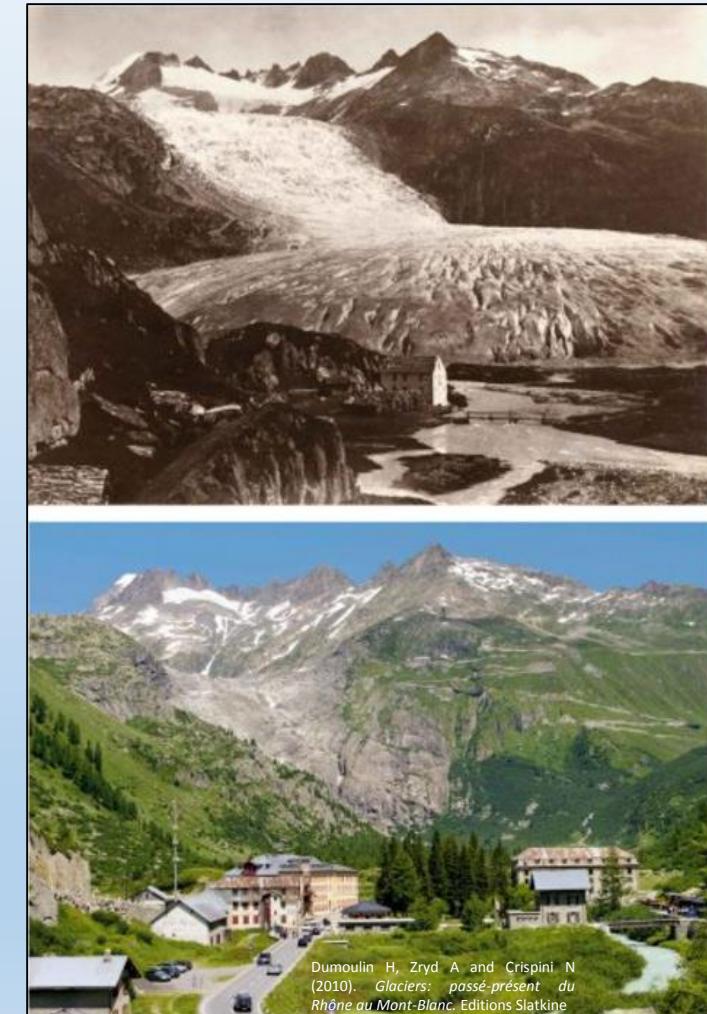

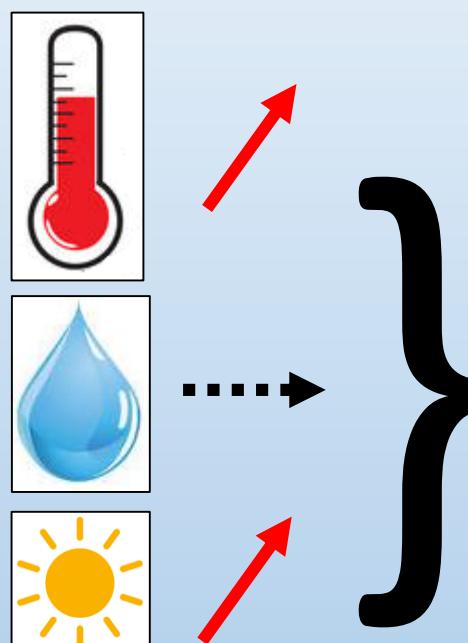

## 2. Climate change and glaciers

Remote sensing of the **interactions between climate variability and glacier dynamics** for an Alpine temperate glacier, from the scale of the decades to hours;  
The case of the Haut Glacier d'Arolla

→ Glaciers tend to retreat

❖ Better understand the interactions

Dumoulin H., Zryd A. and Crispini N  
(2010). *Glaciers: passé-présent du Rhône au Mont-Blanc*. Editions Slatkine

## 3. The Haut Glacier d'Arolla

*Remote sensing of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, from the scale of the decades to hours; The case of the Haut Glacier d'Arolla*

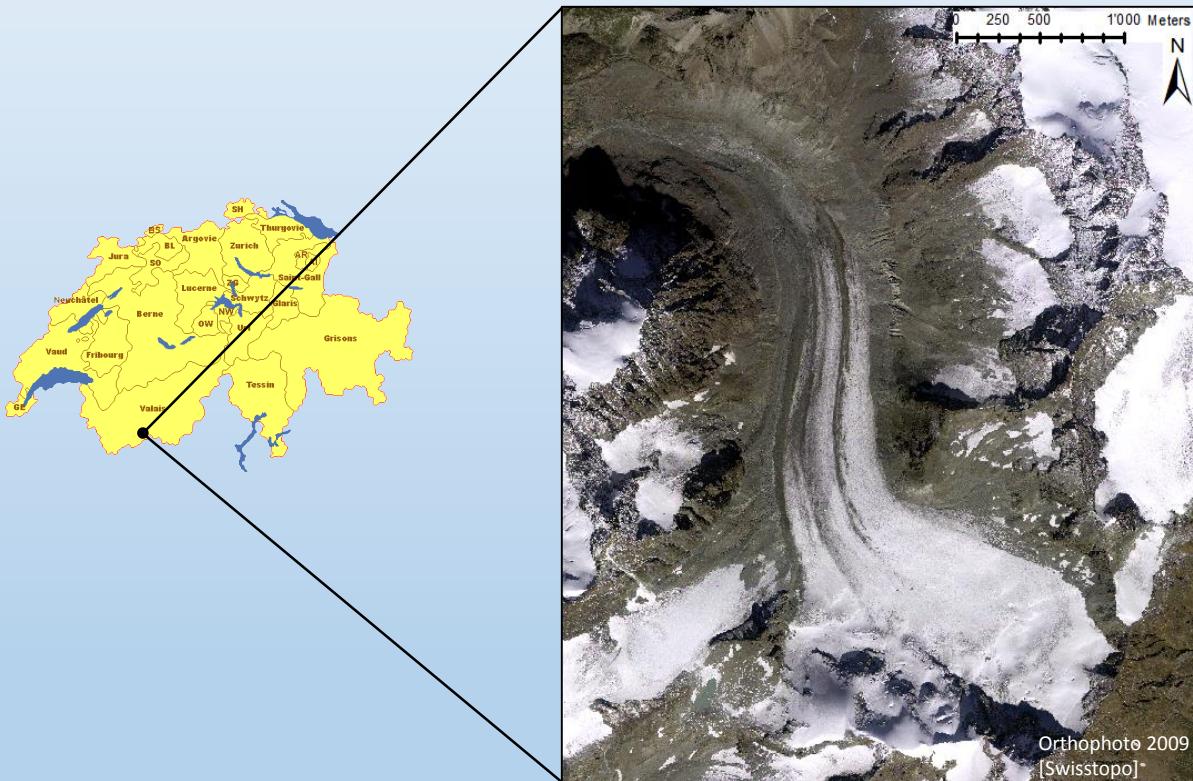

- Temperate glacier, mean altitude 2980 m
  - Numerous publications
- But we still don't know:
  - \* The recent history  
(Not in the VAW – Swiss glacier monitoring network)
  - \* The surface melt spatial distribution

## 3. The Haut Glacier d'Arolla

*Remote sensing of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, **from the scale of the decades to hours**; The case of the Haut Glacier d'Arolla*

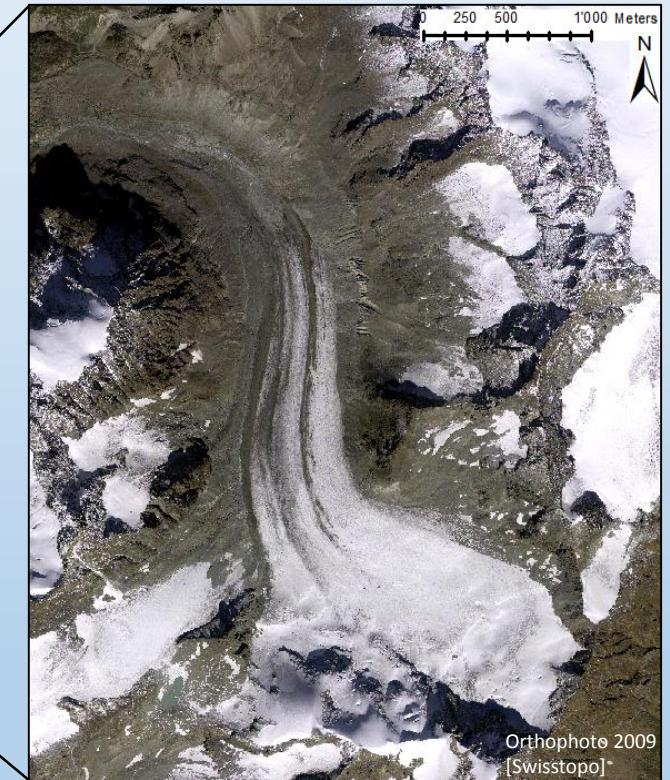

- Temperate glacier, mean altitude 2980 m
  - Numerous publications
- But we still don't know:
  - \* The recent history  
(Not in the VAW – *Swiss glacier monitoring network*)  
→ Long term
  - \* The surface melt spatial distribution  
→ Short term
- ❖ Monitor the Haut Glacier d'Arolla at different time scales

## 4. Study objectives

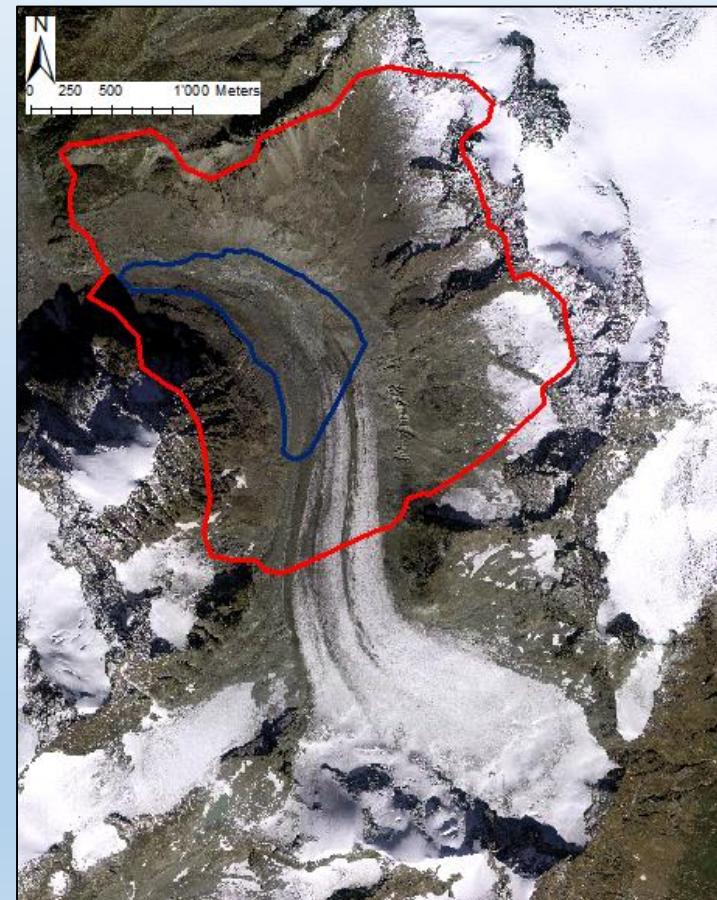

*Remote sensing of the interactions between climate variability and glacier dynamics for an Alpine temperate glacier, from the scale of the decades to hours; The case of the Haut Glacier d'Arolla*

- ❖ 3D topography - Remote sensing
- ❖ Monitor the Haut Glacier d'Arolla at different time scales
- ❖ Better understand the interactions

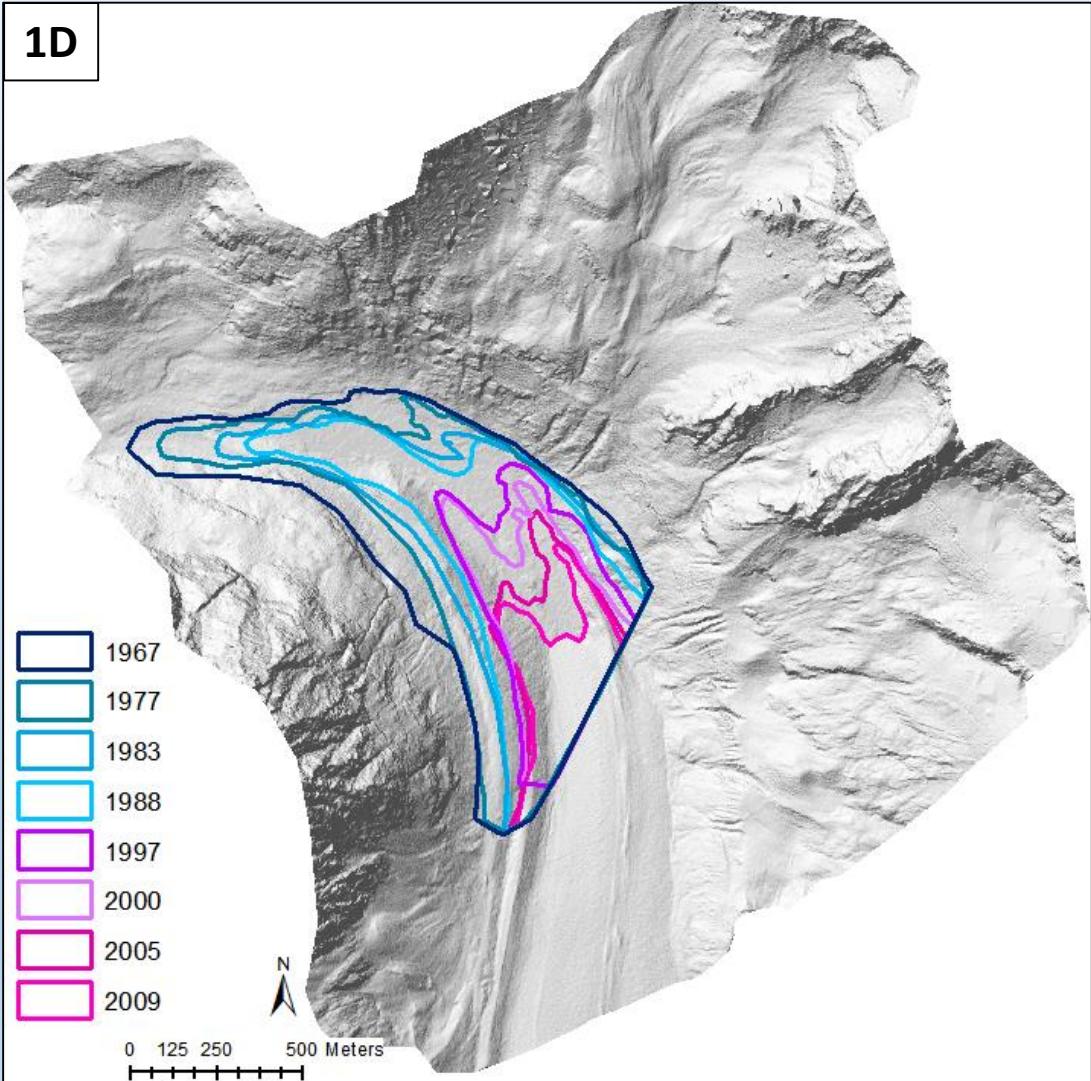

## Response of an Alpine valley glacier to climate change at the decadal scale

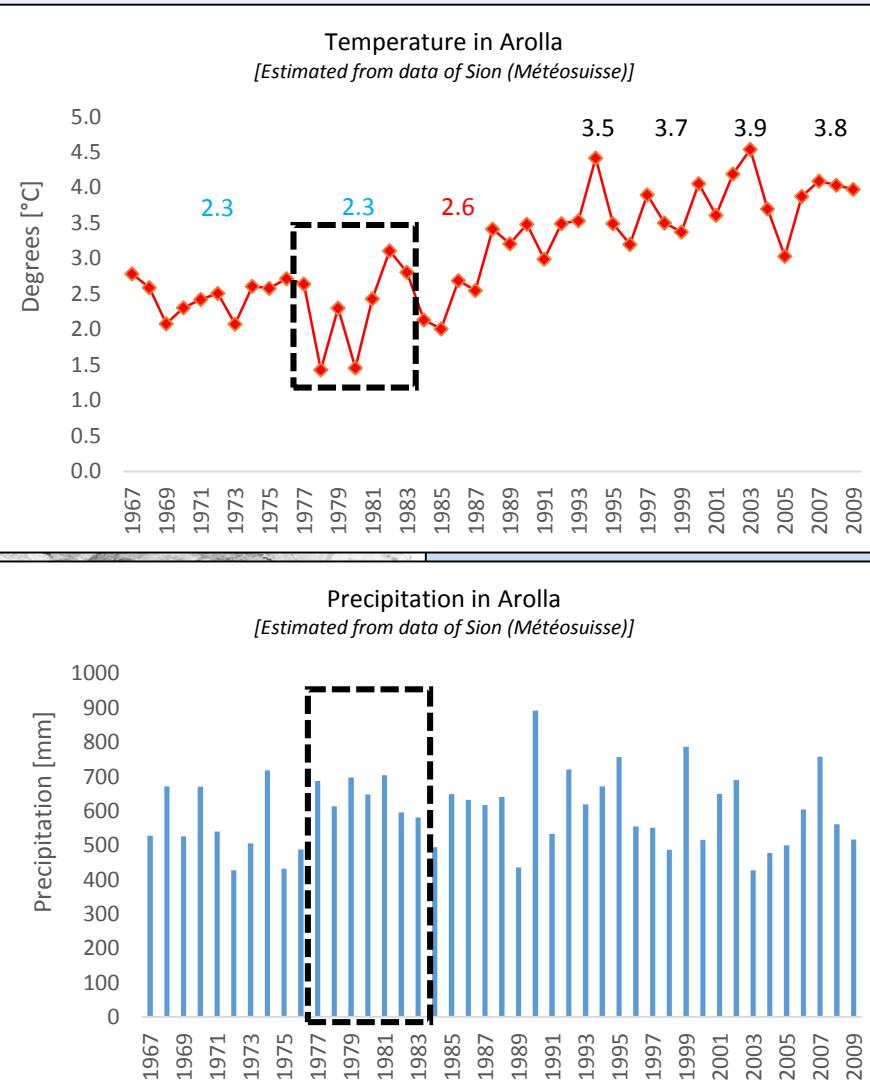

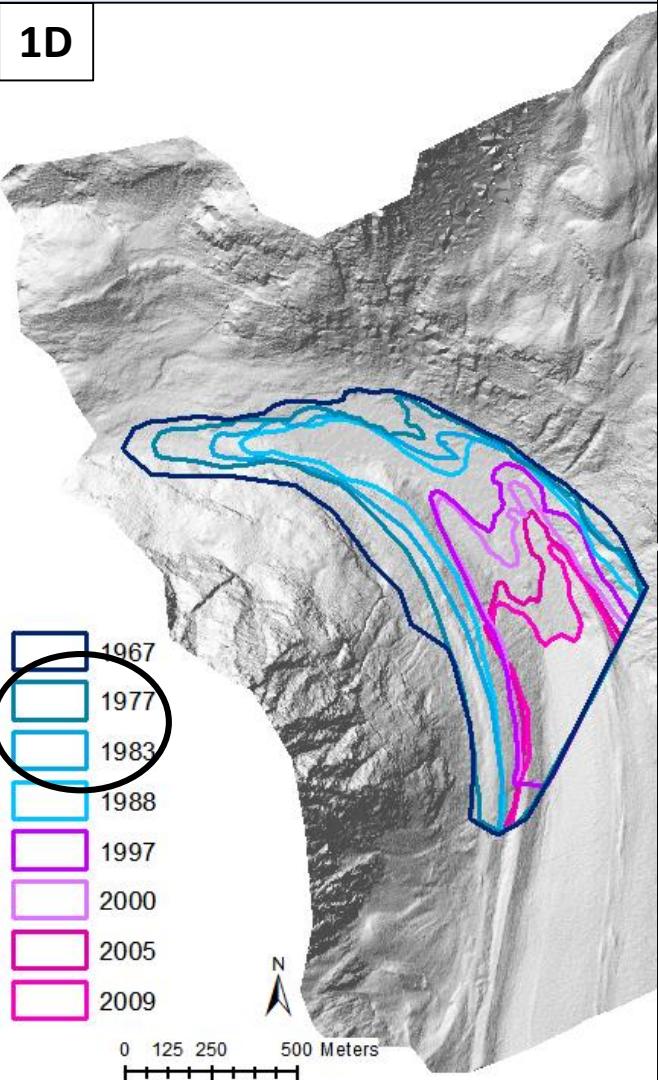

- ❖ Establish glacier front stages – history (1D)  
Establish change in elevation (2D)  
Under climate forcing
- ❖ Archival digital photogrammetry
- ❖ Scale of decades, from 1967 to 2009

1D

1D

To advance early 1980s

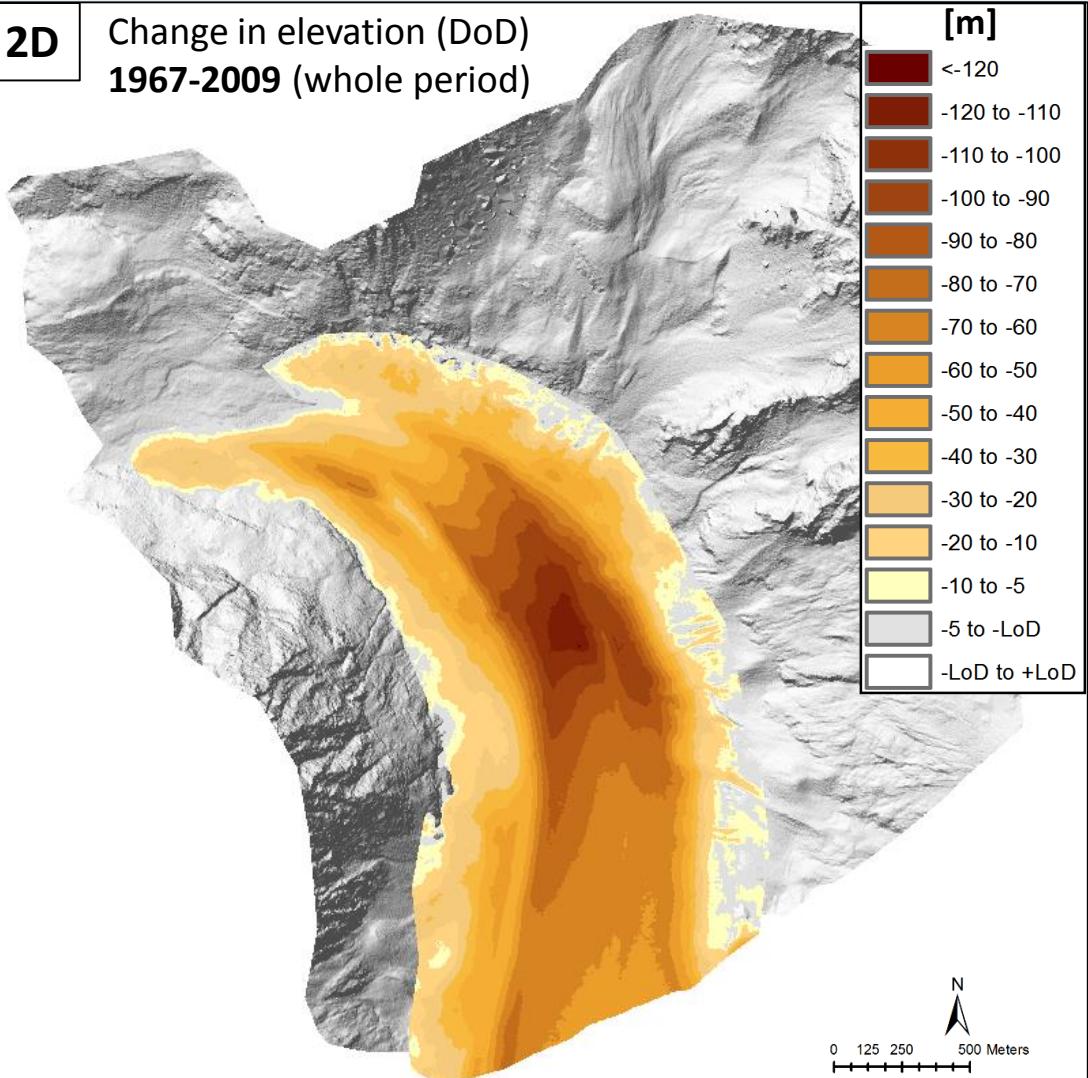

- Snow and ice accumulation > ablation
- Translation accumulation from upstream to downstream  
= Response time / delay
- Function of morphology
- Not fast enough
- Different behaviour of its neighbours

## Decadal scale / photogrammetry

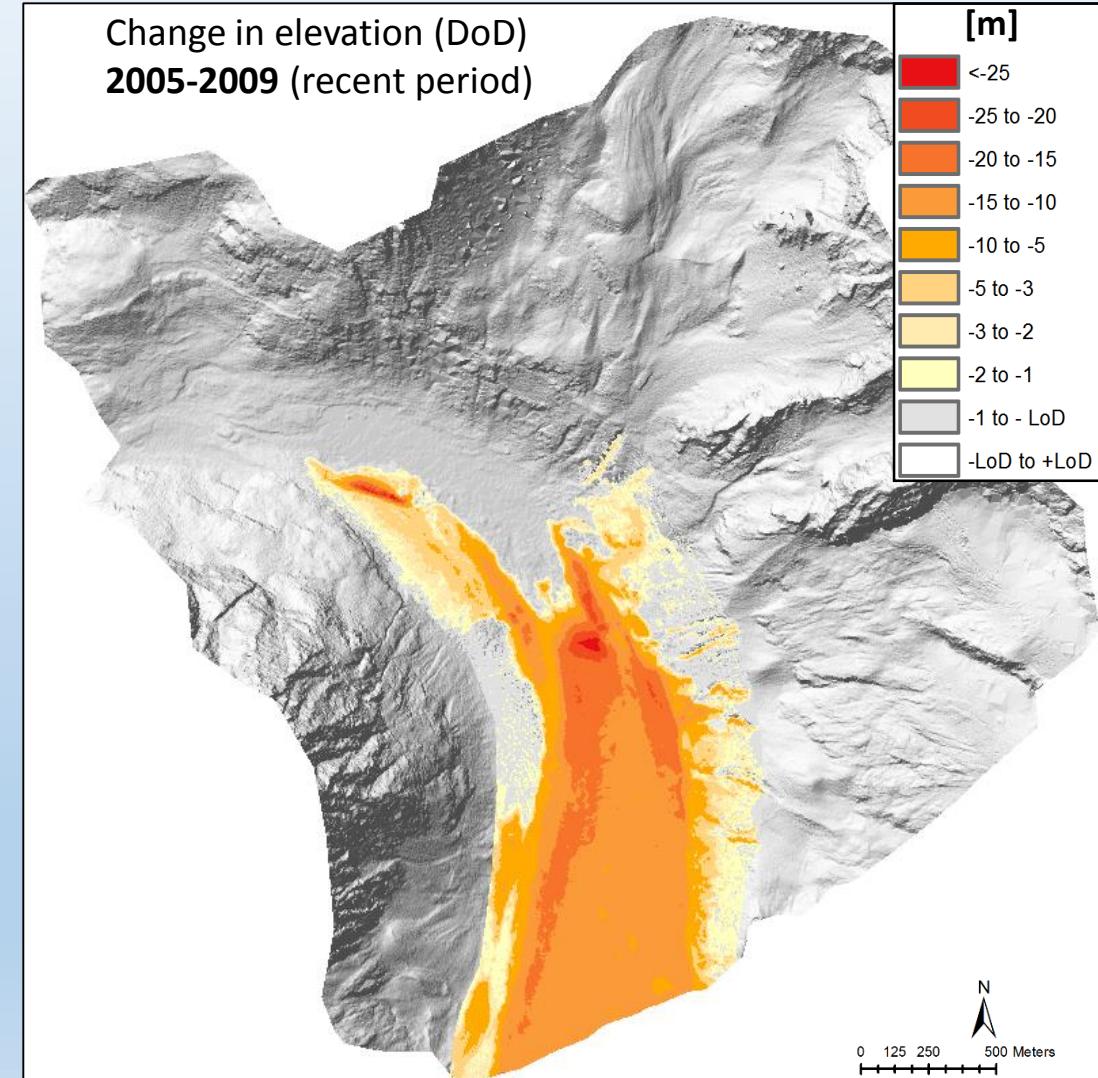

### 2. Result II - Changes in glacier surface elevation

2D

Change in elevation (DoD)  
1967-2009 (whole period)

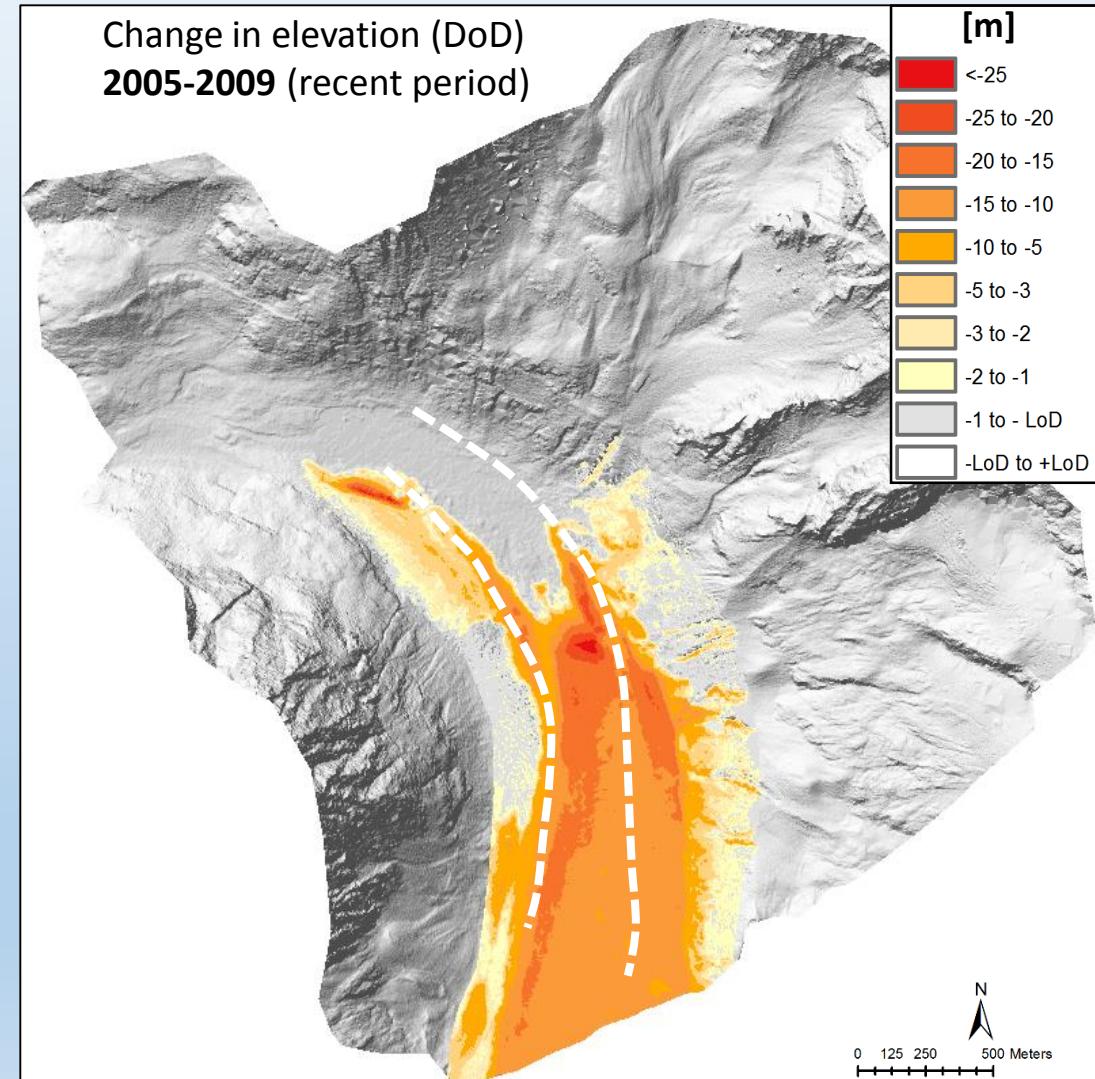

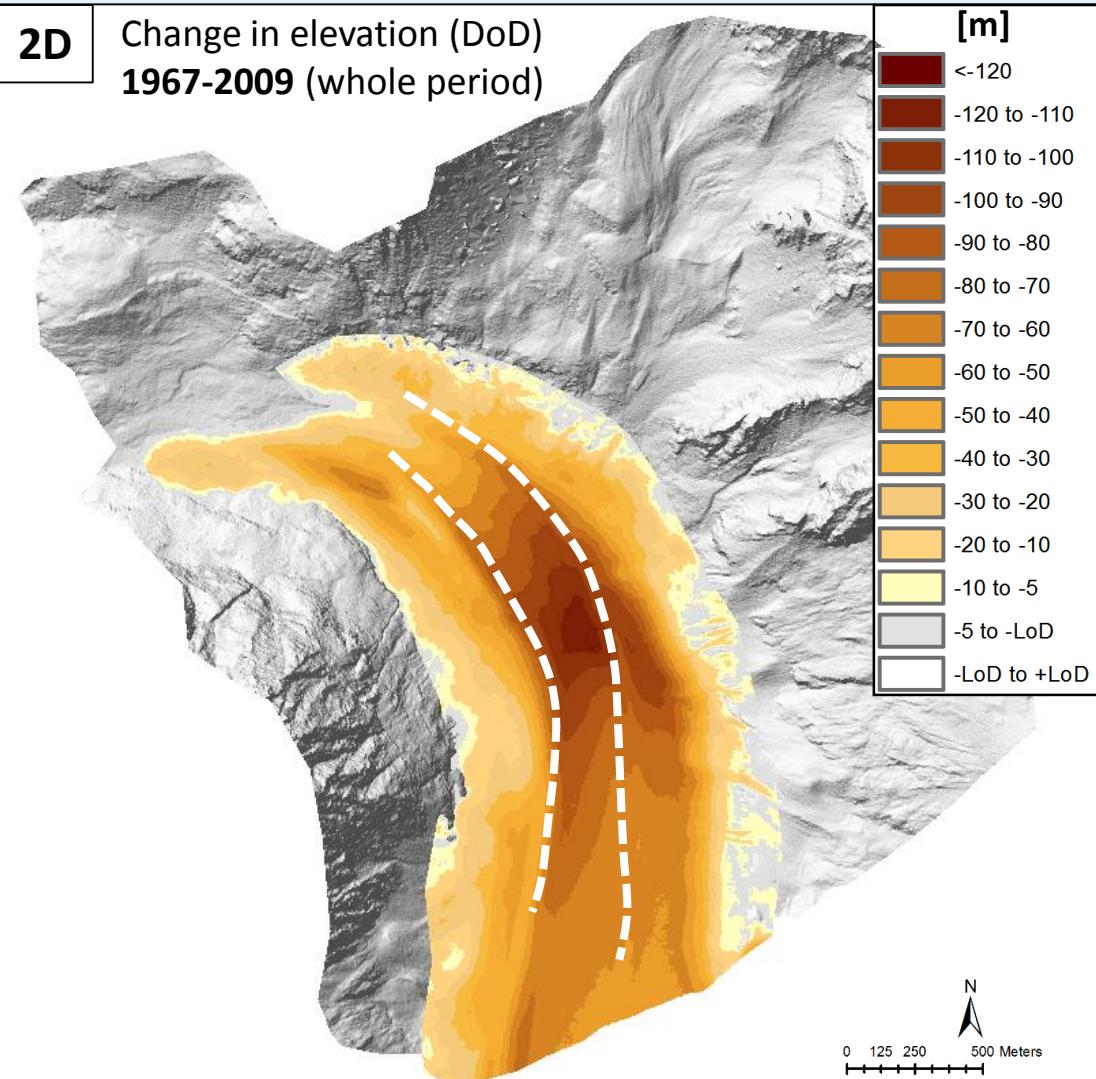

Change in elevation (DoD)  
2005-2009 (recent period)

## Decadal scale / photogrammetry

## **LiDAR measurement of surface melt for a temperate Alpine glacier, at the seasonal and hourly scales**

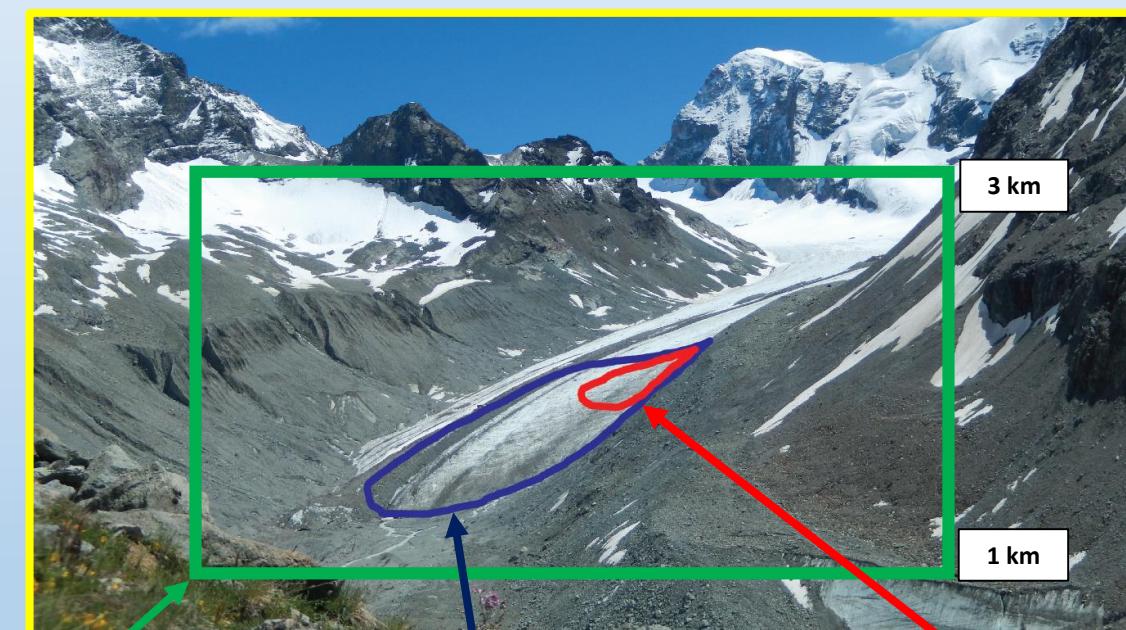

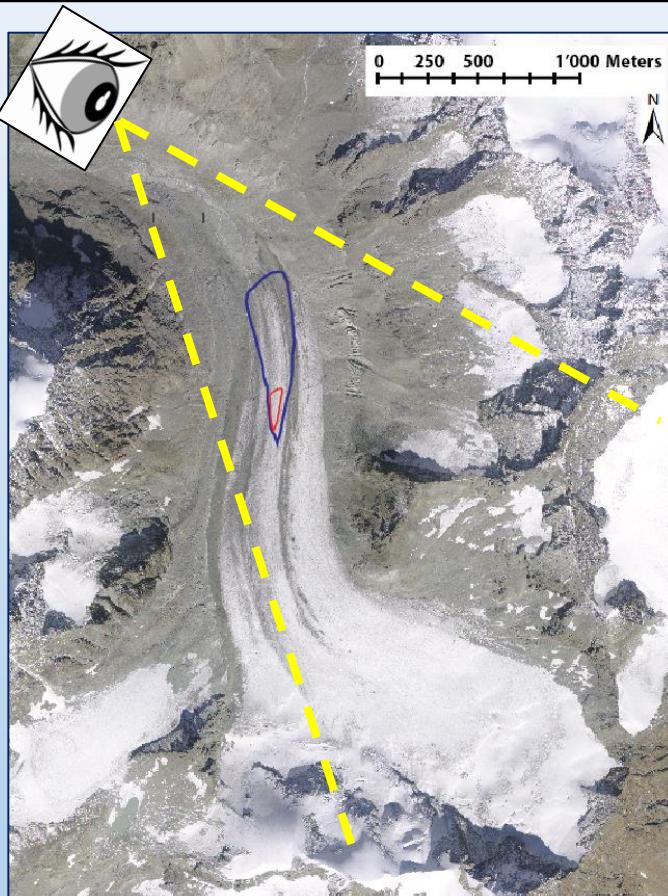

- ❖ Study the glacier surface ablation  
Other elements of hydrodynamics
  
- ❖ Terrestrial laser scanner  
LiDAR laser designed for snow and ice
  
- ❖ Seasonal + intra-daily scales

## Seasonal and intra-daily scales / LiDAR

### 1. Two scales - one point of view

- Seasonal survey  
06/07/2013  
30/07/2013  
05/08/2013  
11/08/2013  
15/09/2013
- Intra-daily survey  
05/08/2013  
9h – 17h each hour

Scan window

Seasonal area selected

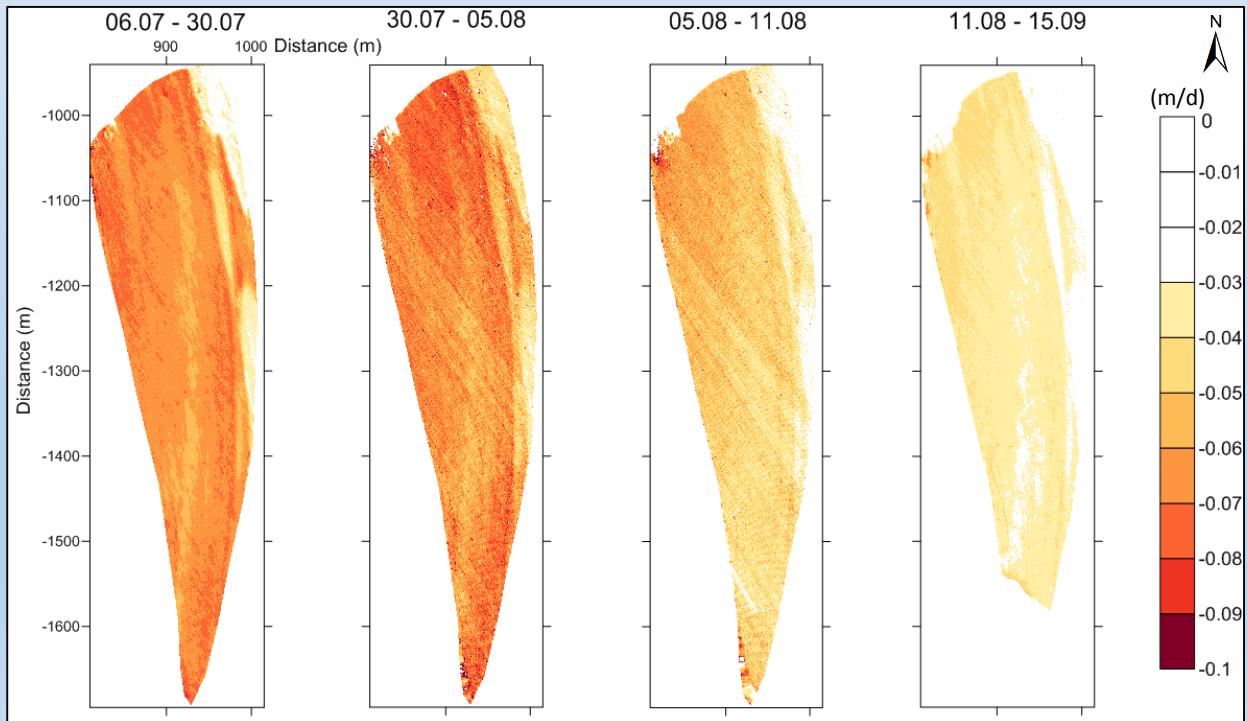

Intra-daily area selected

### 2. Result I - Seasonal scale changes

Seasonal survey

**DoD by couples of dates, normalised by day**

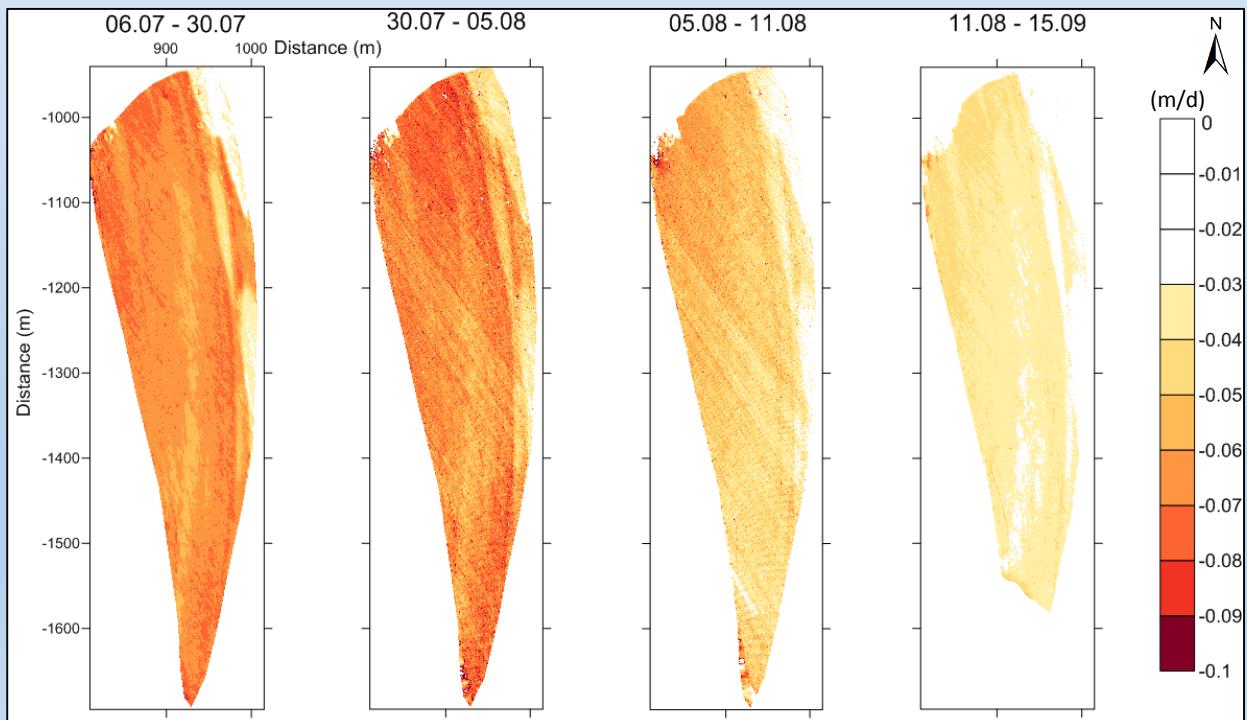

Seasonal area selected

### 2. Result I - Seasonal scale changes

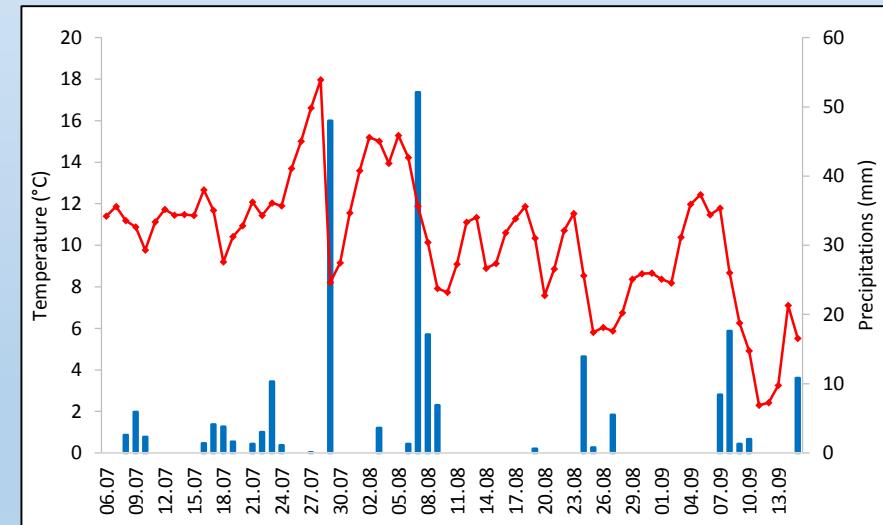

Seasonal survey

**DoD by couples of dates, normalised by day**

Surface vertical changes at seasonal scale

- Relation with seasonal meteorological conditions

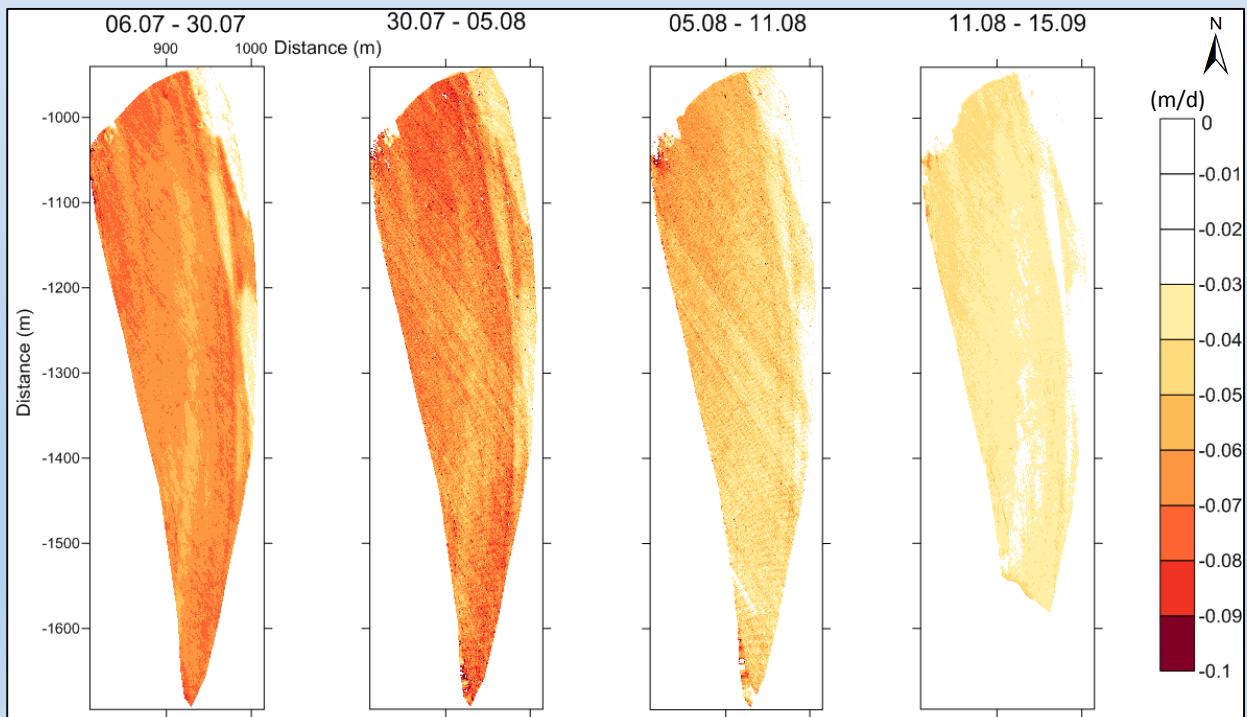

### 2. Result I - Seasonal scale changes

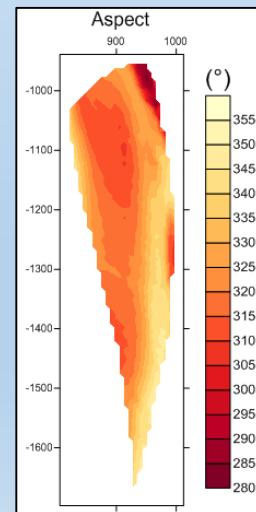

Seasonal survey

**DoD by couples of dates, normalised by day**

Surface vertical changes at seasonal scale

- Relation with seasonal meteorological conditions
- Relation with aspect
- Relation with debris cover, moraines
- Diagonal lines – LiDAR artefacts

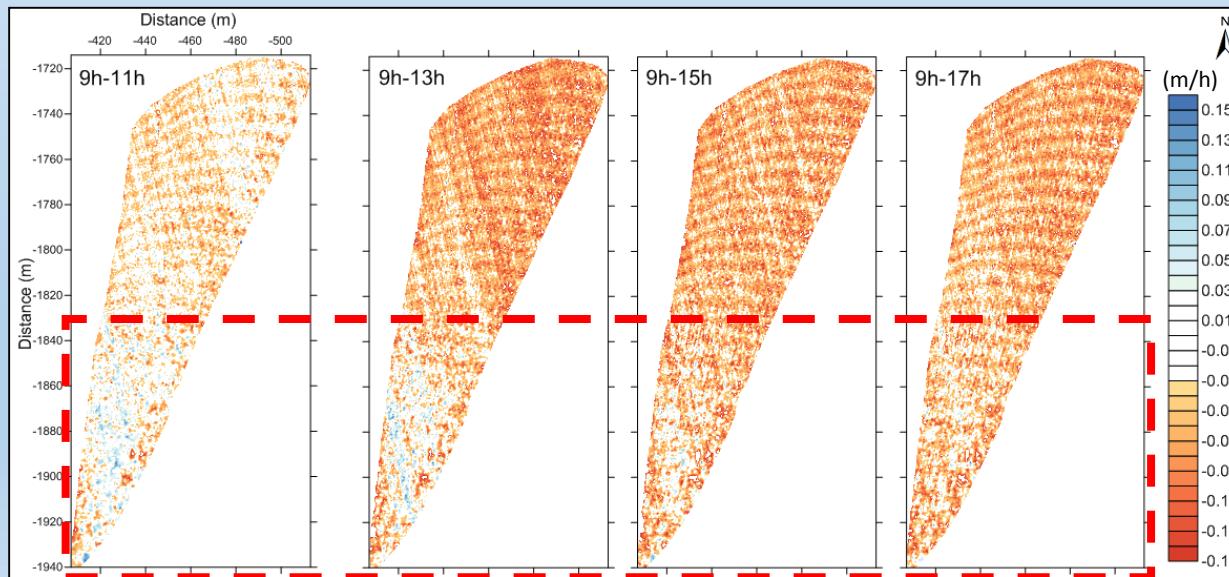

### 3. Result II – Intra-daily scale changes

Intra-daily survey concerned = red delimitation

**DoD 05/08/2013, 9h to each odd hour, normalised by hour**

Surface vertical changes at intra-day scale

- Differential melt associated with ogives
- Positive change ?

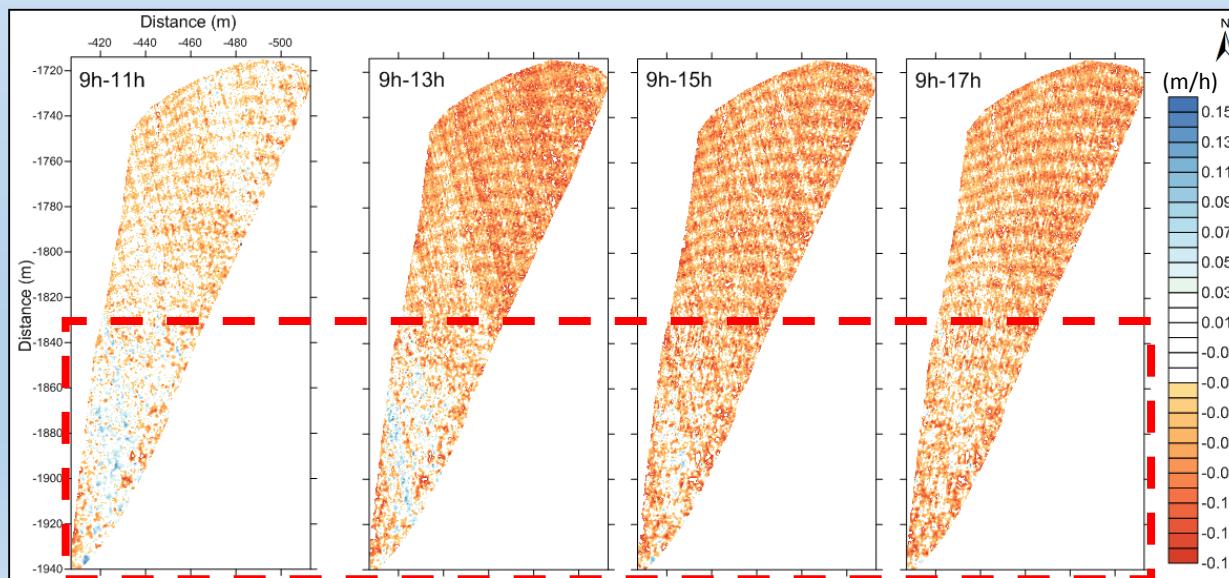

## 3. Result II – Intra-daily scale changes

Intra-daily survey concerned = red delimitation

DoD 05/08/2013, 9h to each odd hour, normalised by hour

Surface vertical changes at intra-day scale

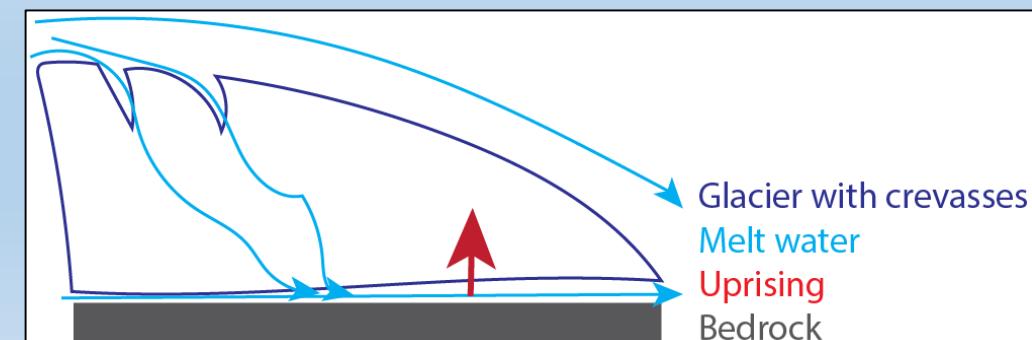

- Differential melt associated with ogives
- Positive change

**Hydraulic jacking?**

Morphological change of subglacial channels

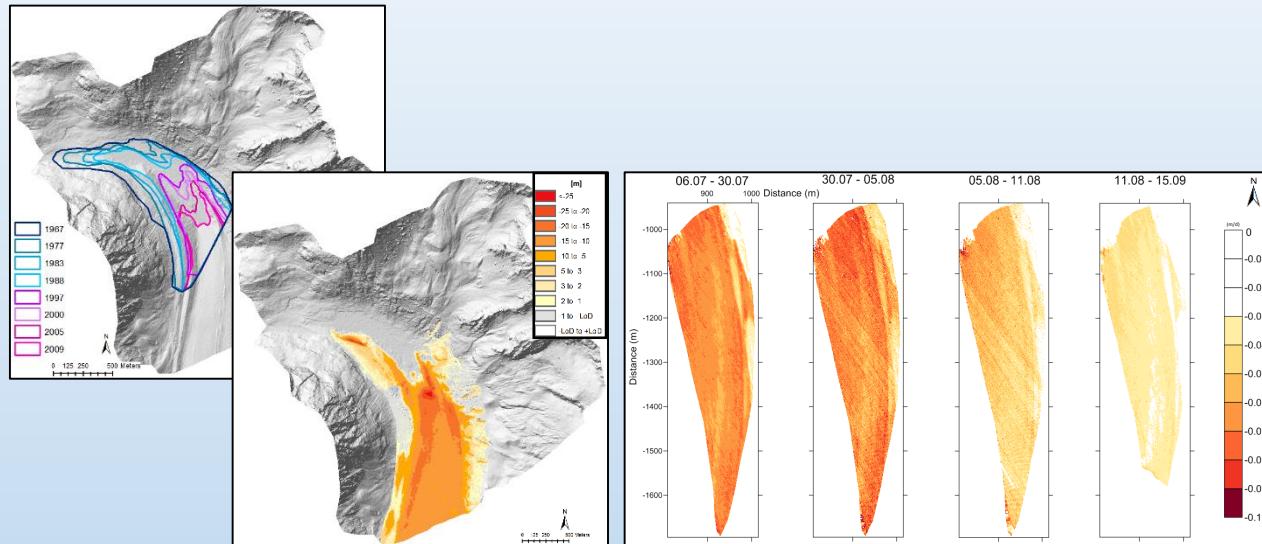

Ice - bed decoupling by water pressure

→ Uplift

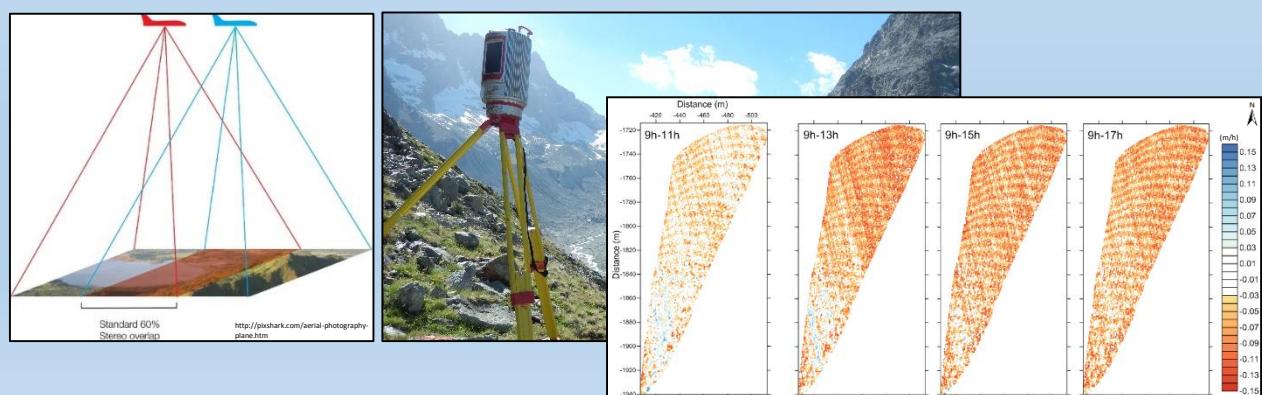

## Reminders

- Haut Glacier d'Arolla in continuous recession since 1967; even during snowier and colder periods  
→ Response time
- Melt rates - spatial patterns  
→ Climate + debris cover effects
- Glacier dynamics at three time scales  
→ Decades, season, intra-day
- Relevance remote sensing methods
- Issue of the hydraulic jacking

1967 → 2009      summer 2013      05/08/2013 – 9h → 17h
