SCOPE OF WORK

---

SCOPE OF  
WORK

## Scope of Work

### 1.1 Introduction

This report was prepared by WHITE CUBES Co. based on the International Valuation Standards of the Council of International Assessment Standards (IVSC 2022) and the Guide to Practice and Regulations issued by the Saudi Authority of Accredited Valuers (Taqeem), to ensure accurate access to information, the evaluation report must be read in its entirety, our firm is pleased to offer its services to Awal Al Malqa Real Estate Company in order to estimate the fair value of the property that is being evaluated.

### 1.2 Purpose of valuation

The client requested that we evaluate the subject properties for **Inclusion in financial statements.**

### 1.3 Basis of Valuation

**According to Paragraph 1.2, the appropriate basis for value adopted in the evaluation process is the fair value of the property.**

IFRS 13 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. It is based on the principle of an "exit price,"

### 1.4 Valuation Methods

Depending on the purpose of the valuation, and upon the request of the client, we will apply the comparable approach, cost approach and income approach.

### 1.5 Currency

Unless otherwise stated, all values in the report are in Saudi Arabian Riyals.

### 1.6 Scope of Research

Research is an important part of the valuation process. We will conduct extensive research and analysis of various factors that can impact the value of a property or asset, such as market conditions, comparable sales, property characteristics, income potential, and legal and regulatory factors.

## 1.7 Property Inspection

Inspection refers to visiting and inspecting an asset, testing its performance, and gathering information about it from quantities, specifications, land area, building areas, rental areas, services, public utilities, project components, etc., so that an opinion can be expressed regarding its value. Therefore, we confirm that subject property was inspected on June 01, 2023. We will then use this evidence to assess and evaluate the project. We remain committed to providing the client with an accurate and reliable valuation.

## 1.8 Information Sources

An on-site field survey was conducted by our team to ensure the accuracy of some market information required for the valuation, including nearby asset prices, occupancy rates, and specific information about the asset under valuation, to determine its actual fair value. The following sources were used during the field research process:

- Property records: In the absence of property ownership documents, the client has provided us with some information about the assets.
- Market trends: Real estate market trends and economic indicators can be used to assess the overall demand and supply for properties in the area.
- Income analysis: Income-producing properties such as rental properties can be valued based on their income potential.
- Personal inspection: A physical inspection of the property can provide valuable information on its condition and any unique features that may affect its value.

## 1.9 Assumptions and Special Assumptions

As defined by the International Valuation Standards, assumptions are logical matters that can be accepted as facts during valuation work without being specifically checked or scrutinized. They are accepted as soon as they are mentioned. Based on the facts at the time of the valuation.

- It has been assumed that the information provided by the client is accurate, but we were not provided with the ownership documents for the asset.
- Assumed that all information received from the client is accurate and up to date as of the date of the valuation, whether oral or written.
- This is a valuation report rather than a structural survey. As a result, we did not conduct any utility checks, service checks, soil tests, etc.
- The valuation methodologies are based on market data compiled using our relevant market knowledge and experience.
- This report's output (final value) is derived from assumptions used, documents received from the client, and market data. Nevertheless, the output estimates provide an indication of the property's value.
- After studying the market and using the built-up model, a discount rate of 8% was assumed for the project.

### **1.10 Use, Distribution, and Publication Restrictions**

To estimate the fair value of the assets being evaluated, WHITE CUBES Co. has prepared this report. There are restrictions on the transfer, referencing, and presentation of this report and its contents to any other party except as stipulated in the contract letter, and the client must obtain our prior written consent in order to use this report for any other purpose other than that stated in this report.

### **1.11 Legal Notes**

As far as we are aware, no legal notices have been served on the property, whether they are in progress or pending in the court system.

**Note:** The client has provided us with a copy of the title deed which was assumed to be correct and authentic. It is not in our scope to run legal diagnosis on any legal document.

## 2.6 Construction and Buildings

The building permit indicates the maximum permissible BUA approved by the city municipality. However, the actual area may differ from the area mentioned in the building permit. Therefore, the Client has provided us with a copy of the Construction Permit issued by Riyadh Municipality with the below details:

| Subject Property         |                    |
|--------------------------|--------------------|
| Construction Permit Type | New Permit         |
| Property Type            | Commercial Project |
| Construction Permit No.  | 9/1/7/27           |
| Construction Permit Date | 20/02/1419         |

| Description            | No. of Units | Area (sqm)   | Use       |
|------------------------|--------------|--------------|-----------|
| Basement               | ----         | 3,906        | Parking   |
| Ground Floor           | ----         | 3,906        | Showrooms |
| First Floor            | ----         | 1,369        | Offices   |
| <b>Total BAU (sqm)</b> |              | <b>9,181</b> |           |

## 2.7 LEASING CONTRACT

The client informed us that the mater lease rent is for 15 years starting on 01/08/1438 ending 30/07/1453. Yet, the net income from rent is as follows:

### First 5 years as follows:

- 3 years: SAR 6.00 mm per year
- 2 years: SAR 4.50 mm after discount

**Second 5 years:** SAR 4.75 mm after discount

**Third 5 years:** SAR 5.00 mm after discount

## 2.8 Building Gross Leasable Area (GLA)

| Use       | No. of Units | BUA (Sqm) | GLA (Sqm) | Information Source                       |
|-----------|--------------|-----------|-----------|------------------------------------------|
| Showrooms | ----         | 9,181     | 5,275     | Rental spaces are provided by the client |

The client informed us with the below:

Al Futtaim Group Company has been added as an additional party to the lease agreement concluded between Awal Al Malqa Real Estate Company and Al Futtaim International Company. And changing the brand name from HOMEWORKS to B&Q. with extension of the discount previously granted to Al Futtaim International Company until the end of the contract.

### 3.3 Sector Brief

In the following we will insert general information about the real estate sector related to the property subject of our valuation and which is intended to give an initial indication on the sector. These information and indicators are estimated based on our experience, the current sector performance and some other historical data collected from our side, In addition to some current economic changes in general.

-  Indicator showing a decrease in the current performance comparing to last year
-  Indicator showing an increase in the current performance comparing to last year
-  Indicator showing a stable position in the current performance comparing to last year

PROPERTY VALUATION

---

PROPERTY  
VALUATION

## Property Valuation

### 4 Valuation Methods

With reference to the valuation purpose, taking into consideration the nature of the subject property, we will use the following ticked methods to estimate the fair value of the subject property:

|           | Market Approach   | Cost Approach | Income Approach |                |                  |            |
|-----------|-------------------|---------------|-----------------|----------------|------------------|------------|
|           | Comparable method | DRC method    | DCF method      | Invest. method | Cap. Rate method | RLV method |
| Land      | ✓                 | ----          | ----            | ----           | ----             | ----       |
| Buildings | ----              | ✓             | ----            | ----           | ----             | ----       |
| Property  | ----              | ----          | ✓               | ----           | ----             | ----       |

#### COMPARABLE METHOD

This is the method most are familiar with as it is the accepted method for valuing residential real estate. Typically, this method involves selecting properties with similar characteristics in the same market area that have recently sold. Once those properties are found they are compared to the property in question and a professional appraiser will deduct value from the subject property for comparative deficiencies and increase value for advantages. Typically, this method is required if the investor is seeking conventional financing. For comparable information, property brokers, dealers and estate agents are contacted to ascertain the asking and selling prices for property of the nature in the immediate neighborhood and adjoining areas. Neighboring properties, which have been recently sold or purchased, are investigated to ascertain a reasonable selling price.

#### DEPRECIATED REPLACEMENT COST (DRC)

A cost approach is a real estate valuation method that surmises that the price someone should pay for a piece of property should not exceed what someone would have to pay to build an equivalent building. In cost approach pricing, the market price for the property is equivalent to the cost of land plus cost of construction, less depreciation. It is often most accurate for fair value when the property is new. Generally, the cost approach considers what the land, devoid of any structures, would cost, then adds the cost of building the structures, then depreciation is subtracted. The cost approach is most often used for public buildings, such as schools and mosques, because it is difficult to find recently sold comparable properties in the local market, and public buildings do not earn income, so the income approach cannot be used, either. A property that already has improvements will usually contribute a certain amount of value to the site, but improvements can also lower property value if the site's potential buyers wish to use the property for another use that would entail removing some of the improvements to the current site. The cost approach is best used when improvements are new and there is adequate pricing information to value the property components. The cost

approach may be less desirable if there are no recent sales of vacant land for which to compare, since the major method of valuing vacant lands is to use the sales comparison approach, or when construction costs are not readily available. The cost approach method includes:

- Estimate what the subject property would be worth.
- Estimate the current cost of building the structures, then add that value to the value of the vacant land.
- Estimate the amount of accrued depreciation of the subject property, then subtract it from the total to arrive at the property's worth.

### **DISCOUNTED CASH FLOW (DCF)**

The Discounted Cash Flow Method involves estimating net cash flows of an income generating property over specific period and then calculating the present value of that series of cash flows by discounting those net cash flows using a selected "discount rate." A discounted cash flow method (DCF) is a valuation method used to estimate the attractiveness of an income generating property.

## 4.1 Comparable Method

This method aims to collect data and information on actual sales and / or current offers of similar properties within the surrounding market, and then make the necessary adjustments to these comparisons in terms of area, location, shape, quality, content, and others. Below is a summary of the valuation process using the comparable method and the amendments made to the available comparisons.

| Characteristics of Samples            |                  |                |              |                |              |                |              |
|---------------------------------------|------------------|----------------|--------------|----------------|--------------|----------------|--------------|

| SAR 58,100,000 | Property Value       | SAR 52,290,000 | SAR 55,195,000 | SAR 58,100,000 | SAR 61,005,000 | SAR 63,910,000 |

Based on the market samples obtained with the assistance of some real estate experts in the region and the inspection made by our team, the average price for similar properties falls in the range of 8,000 - 8,500 SAR / Sqm with an average of 8,300 SAR / Sqm. When comparing with the results of the analysis of comparisons, we found that the property value falls within the same range and is close to the market average values.

## 4.2 Depreciated Replacement Cost (DRC)

As a first step, the cost of reconstructing the building (the cost of replacement) was estimated, based on the average construction costs of similar properties and at the same level of finishes, services, utilities, and others. The opinion of some engineering experts was used in this regard. The following table shows the expected replacement costs for such property.

|                     | Min Cost (SAR / Sqm) | Max Cost (SAR / Sqm) | Average Cost |
|---------------------|----------------------|----------------------|--------------|
| Concrete Cost       | SAR 900              | SAR 1,100            | SAR 1,000    |
| MEP                 | SAR 550              | SAR 650              | SAR 600      |
| Finishing Materials | SAR 450              | SAR 550              | SAR 500      |
| Site Improvements   | SAR 100              | SAR 140              | SAR 120      |
| Owner Profit        | 18%                  | 22%                  | 20%          |

In the following table, we will estimate the direct replacement cost of the property taking into consideration the main components of the building, such as the concrete structure, electromechanical work, finishes, site improvements, etc. Then we will estimate the value of the indirect costs as a percentage of the total direct costs to estimate the total construction costs of the project

| Land      |           |                |
|-----------|-----------|----------------|
| Land Area | SAR / Sqm | Total Value    |

| <b>TOTAL</b>                   |                          |           |                      | <b>12.10%</b>             | <b>SAR 2,529,057.30</b> |
| <b>Total Hard Cost</b>         | <b>SAR 20,901,300</b>    |           |                      | <b>BUA</b>                | <b>9,181.00</b>         |
| <b>Total Soft Cost</b>         | <b>SAR 2,529,057.30</b>  |           |                      | <b>SAR / Sqm</b>          | <b>SAR 2,552</b>        |
| <b>Total Construction Cost</b> | <b>SAR 23,430,357.30</b> |           |                      | <b>Overall Completion</b> | <b>100 %</b>            |

After knowing the total construction costs at a rate of 2,552SAR per square meter, we will estimate the economic life of the property according to the type of construction and its general condition, then apply the depreciation rates based on the actual age of the property. The developer's profitability will be added to the property's value after depreciation to reflect the estimated fair value of the building.

| DEVELOPMENT VALUE     |                |                         |                |
|-----------------------|----------------|-------------------------|----------------|
| Total Dev Cost        | SAR 23,430,357 | Annual Dep Rate         | 2.0%           |
| Total Completion Rate | 100%           | Actual Age              | 24             |
| Developer Profit Rate | 20%            | Total Dep Rate          | 44.00%         |
| Dev. Profit Amount    | SAR 4,686,071  | Add Appr Rate           | 0.00%          |
| Development Value     | SAR 17,807,072 | Net Dep Rate            | 44.00%         |
| Economic Age          | 50             | Cost After Depreciation | SAR 13,121,000 |

In order to determine the full value of the property, the construction costs will be added to the fair value of the land as follows:

| Total Dev. Value | Land Value     | Total Property Value | Rounded Value  |
|------------------|----------------|----------------------|----------------|
| SAR 17,807,072   | SAR 58,100,000 | SAR 75,907,072       | SAR 75,910,000 |

### **Analysis of Operating and Maintenance Expenses**

The operating expenses of similar properties reached between 15% to 20% of the total expected income for the property. These ratios depend on the condition and quality of the property and the type of services and public facilities available in the property itself. These ratios are divided into several main categories as follows:

|                                    |          |
|------------------------------------|----------|
| Management expenses                | 5% to 7% |
| Operating and maintenance expenses | 5% to 6% |
| General service bills expenses     | 3% to 4% |
| Other incidental expenses          | 2% to 3% |

### **Property Operation and Maintenance Expenses**

The client did not provide us with details of the actual maintenance and operation costs of the project and accordingly market averages for similar projects will be assumed. Therefore, we will apply the rate of 15% as the OPEX which will be calculated from the total revenues of the property. This ratio is based on the condition and quality of the property and the type of services and public facilities available in the property itself.

### **Market Capitalization Rate Analysis**

Based on recent transactions of real estate properties and funds, the average capitalization rate of acquiring such property falls in the range of 7% to 8%. This average is mainly driven by several factors such as the quality of the building, finishing materials, the general location, ease of access, actual age of the property, size of the project, and the extent of income stability in it. In addition to the above, the capitalization rates are also affected directly by the supply and demand rates for the same type of real estate.

### **The Capitalization Rate Used for the Valuation**

The capitalization rate was derived by extracting from the market, where we found that the minimum is 8% and the maximum is 7%. A capitalization rate of 7.5% was assumed, and it is considered a reasonable percentage after taking into account the components of the property, and it represents the return expected to be achieved by the property at the end of the period, which will be applied later. on the net operating income of the property

## Estimated the Discount Rate of Cash Flows

To estimate the discount rate used in the cash flow method, we will use the cumulative model, which includes a calculation of a number of risks related to the real estate, for the purpose of determining the value of future cash at the present time. The estimation of the existing risk rates was based on current developments in the real estate market.

| Discount rate calculation (cumulative model). |       |        |                                                                                                                                                                                                                                   |

#### 4.5 Subject Property Value in Different Approaches

| Methodology       | Subject of Valuation | Value in Numbers | Value in Letters                                                   |
|-------------------|----------------------|------------------|--------------------------------------------------------------------|
| DRC Approach      | Land + Building      | SAR 75,910,000   | Seventy-Five Million Nine Hundred Ten Thousand Saudi Riyals        |
| DCF- Market Rates | Property             | SAR 68,158,000   | Sixty-Eight Million One Hundred Fifty-Eight Thousand Saudi Riyals. |
| DCF- Contract     | Property             | SAR 68,300,000   | Sixty-Eight Million Three Hundred Thousand Saudi Riyals            |

#### 4.6 Subject Property Value

We are of an opinion that the total fair value of the subject property taking into consideration the purpose of valuation by using the Discounted Cash Flow Approach- Market Rates is:

**Property Value: 68,158,000 SAR**  
**Sixty-Eight Million One Hundred Fifty-Eight Thousand Saudi Riyals.**
