Valuation

4.1 Valuation Approaches

Principal valuation approaches and Residual Method	
Market Approach	*"The market approach provides an indication of value by comparing the asset with identical or comparable (that is similar) assets for which price information is available.* *The market approach should be applied and afforded significant weight under the following circumstances:* *(a) the subject asset has recently been sold in a transaction appropriate for consideration under the basis of value,* *(b) the subject asset or substantially similar assets are actively publicly traded, and/or* *(c) there are frequent and/or recent observable transactions in substantially similar assets."*
Income Approach	*"The income approach provides an indication of value by converting future cash flow to a single current value. Under the income approach, the value of an asset is determined by reference to the value of income, cash flow or cost savings generated by the asset.* *The income approach should be applied and afforded significant weight under the following circumstances:* *(a) the income-producing ability of the asset is the critical element affecting value from a participant perspective, and/or* *(b) reasonable projections of the amount and timing of future income are available for the subject asset, but there are few, if any, relevant market comparables."*
Cost Approach	Replacement Cost Method is categorized under Cost Approach in the International Valuation Standards 2022 and is defined as *"replacement cost is the cost that is relevant to determining the price that a participant would pay as it is based on replicating the utility of the asset, not the exact physical properties of the asset"*.
Residual Method	*"The residual method is so called because it indicates the residual amount* *after deducting all known or anticipated costs required to complete the* *development from the anticipated value of the project when completed after* *consideration of the risks associated with completion of the project. This is known as the residual value."*

The Discounted Cash Flow Method is categorized under Income Approach in the International Valuation Standards 2022 and is defined as "*Under the DCF method the forecasted cash flow is discounted back to the valuation date, resulting in a present value of the asset*".

4.2.1.1 Calculating the cost of land (market Approach – comparable transactions method)

The International Valuation Standards 2022 classify the comparative transactions method under the market approach and define it as "the comparative transactions method, also known as the indicative transaction method, uses information about transactions for assets that are identical or similar to the subject asset to arrive at an indication of value."

4.2 Valuation Analysis

4.2.2 Income Approach- Discounted Cash Flow Method

According to the International Valuation Standards "2022", in the discounted cash flow method, the expected cash flows are discounted to the date of valuation, which results in a present value of the asset_, In some cases, discounted cash flows can include a final value that represents the value of the asset. The asset at the end of the explicit forecast period."
Given the expected change in the income of the property under valuation and its failure to reach full maturity at current revenue levels, the cash flow method was chosen to valuate the property using the income method and the explicit forecast period was determined in accordance with these inputs.

4.2.2.1 Contractual lease data.

- Tenant: Al-Farabi Colleges for Education Company.
- Contract start date: 09/15/2020.

- The legal nature of the contract: The contract is not considered an executive document due to the presence of additional terms or conditions.

- All costs related to construction, maintenance and operation - if any - have been deducted to arrive at the net cash flows. Net cash flows have been discounted at a discount rate of -10% to reflect the risks associated with the property.
- Appendix No. (5.4) shows details of cash flows

4.3 Valuation Analysis

Since different values of the property have been reached through several methods, and in order to determine the final value of the property, the weighting of the methods used in the valuation to reach the final valuation will be calculated according to the following:

Weighing used valuation methods			
Valuation method	Value	Weight &	Weight value
Depreciation cost	61,205,400.00 SAR	0%	0 SAR
Discounted cash flow	82,087,009.49 SAR	100%	82,087,009.49 SAR
Total		100%	82,087,009.49 SAR

The income method was preferred to the cash flow method instead of the replacement cost method because the property generates income, which is the basis for the possibility of an exchange between a willing buyer and a willing seller in the framework of a transaction on a neutral basis, and accordingly it reflects the market value of the property.

4.4 Opinion of Value

Opinion of value

4.5 Validity of review and clarification

- Review is valid (30 days) from the date the first draft was issued.
- The estimated value of the property was reached through the following international methodologies and methods adopted by Saudi Authority for Accredited Valuers.

No part of this appraisal, its value estimates, or the identity of the firm or the appraiser may be communicated to the public through advertising, public relations, media sales, or other media.

All files, work papers and documents developed in connection with this assignment are the property of the appraiser, ESNAD.
