		Applications in this report	It was assumed that the property is free of any impediments, regulatory constraints, or ownership-related issues that could restrict the ability to transfer or utilize the property, and the value opinion was formed based on this assumption.

4.3 Opinion of Value

4.4 Validity of review and clarification

4.1 Valuation Approaches

Principal valuation approaches and Residual Method	
Market Approach	<i>"The market approach provides an indication of value by comparing the asset with identical or comparable (that is similar) assets for which price information is available.</i> <i>The market approach should be applied and afforded significant weight under the following circumstances:</i> <i>(a) the subject asset has recently been sold in a transaction appropriate for consideration under the basis of value,</i> <i>(b) the subject asset or substantially similar assets are actively publicly traded, and/or</i> <i>(c) there are frequent and/or recent observable transactions in substantially similar assets."</i>
Income Approach	<i>"The income approach provides an indication of value by converting future cash flow to a single current value. Under the income approach, the value of an asset is determined by reference to the value of income, cash flow or cost savings generated by the asset.</i> <i>The income approach should be applied and afforded significant weight under the following circumstances:</i> <i>(a) the income-producing ability of the asset is the critical element affecting value from a participant perspective, and/or</i> <i>(b) reasonable projections of the amount and timing of future income are available for the subject asset, but there are few, if any, relevant market comparables."</i>
Cost Approach	Replacement Cost Method is categorized under Cost Approach in the International Valuation Standards 2022 and is defined as <i>"replacement cost is the cost that is relevant to determining the price that a participant would pay as it is based on replicating the utility of the asset, not the exact physical properties of the asset"</i>.
Residual Method	<i>"The residual method is so called because it indicates the residual amount</i> <i>after deducting all known or anticipated costs required to complete the</i> <i>development from the anticipated value of the project when completed after</i> <i>consideration of the risks associated with completion of the project.</i> <i>This is known as the residual value."</i>
